One Net. Beyond the standard.

One Net is here to offer the complete and integrated advanced cyber security onboard your vessel. Although One Net continues to offer **Standard Cyber Security Practices**—a firewall solution with standard policies and monitoring to keep the ships network efficient—these practices are no longer sufficient without advanced security services:

Advanced Security Services

Built into Zwana is the multiple security award winning WatchGuard T30, offering UTM features such as Intrusion Prevention, URL Filtering, Application Control, Gateway Antivirus, Reputation-Based Threat Protection, Spam Prevention, APT Blocker, Threat Detection & Response, Data Loss Prevention.

zwana®

Email Threat Prevention

A protected service that identifies, analyses and blocks advanced and persistent email attacks. ETP minimizes the risk of costly breaches and aims to catch sophisticated and targeted spear phishing attacks designed to bypass traditional antivirus software. It accurately detects and can immediately stop advanced and targeted attacks, including spear phishing and ransomware before even entering your environment.

Cyber Security Training

Cyber Defence specialist training on a wide range of security concerns in the maritime industry. Drive your company to be "Cyber Aware" from services such as User Awareness, Risk Assessments, Defence Planning, Penetrations Testing and Phishing Simulation.

Security Policy

Supported by industry experts, One Net can provide the relevant know how and consultation to assist in defining and designing the vessels Security Policy while providing support and assistance in its implementation.
