

USB SecScan

Transferring Maritime Data Safely & Securely

OBJECTIVE

Use of **ONLY ONE** flash drive on vessel network avoiding use of crew's own potentially infected ones

METHOD

File transfer to USB SecScan from crew's own flash drive

Filtered files transferred to Captain's Single Flash Drive

Vessel Network

With the increasing use of systems with embedded software on ships and mobile offshore platforms, cyber security is becoming critical not only for data protection, but also for reliable operations. Hence the need for an effective, easy and affordable tool to help secure on-board systems from cyber security threats.

How it works

The USB SecScan is easy to use.

The device enables safe data transfer from a potentially infected flash drive to a sanitized one, copying only the information needed and transferring it to the destination drive.

Why use USB SecScan

- **EASY AS 1-2-3!**

No special training needed, anyone can use it.
Just 2 flash drives, the USB SecScan and one simple interface - that's it!

- **SMALL FOOTPRINT**

Easily portable

- **RESPONSIVE DISPLAY**

5" Touch screen is convenient to use

- **FAIL-SAFE APPROACH**

Simplicity & efficiency of the USB SecScan reduces human error to a minimum

A dark blue shield-shaped graphic with the words 'SAFETY FIRST' in white, bold, sans-serif capital letters. The shield is positioned at the top of a larger, dark grey banner that contains additional text.

**SAFETY
FIRST**

Providing full protection of on-board systems against potential threats from USB drives.
